Gold Peak kicks off Nickel Zinc strategic plan GP Energy Tech launches first Nickel Zinc battery manufacturing facility in Dongguan, PRC

GP Energy Tech, the leading provider of Nickel-Zinc energy solutions under Gold Peak, has officially launched its first Nickel Zinc (NiZn) battery manufacturing facility in Dongguan in early January 2026. The launching represents a significant milestone in the company's battery manufacturing operations with an initial capacity target of 20 million cells per year (64MWh) by the end of 2026. This marks the first phase of its manufacturing development, preceding the planned establishment of a giga campus following the completion of the Johor-Singapore Special Economic Zone (JS-SEZ).

Alan Lo, Executive Vice Chairman of GP Energy Tech stated, "The opening of our Dongguan ZincTech manufacturing facility is the first step in our NiZn manufacturing strategy. Taking advantage of its proximity to our Innovation Centre and the Shenzhen ports, our goal is to establish scalable, high-volume, and quality lights-out manufacturing. All the work performed here will allow us to expand our manufacturing footprint to Malaysia to meet the growing needs of our customers and the market for safe, powerful, and sustainable immediate power backups."

GP Energy Tech, a direct subsidiary of Gold Peak Technology Group with over 60 years of expertise in battery technology, leads the way in developing next-generation NiZn battery solutions, which are designed to revolutionize immediate power applications through their high power density, recyclability, and non-flammable properties — representing a significant breakthrough for the industry. The NiZn batteries offer reliable and sustainable power for Uninterruptible Power Supply (UPS) systems in data centers and other critical infrastructures, ensuring exceptional safety and performance.

The Dongguan manufacturing facility establishes a strategic base for the Group to capture business opportunities from the expanding market for immediate power backup solutions and to fulfil the requirements for safe, dependable power in the era of artificial intelligence.
